

Speed Monitored at these points between 4th and 14th March 2017
 Data courtesy of Transport Dynamics and Plumpton Racecourse

Below we provide the 85th percentile speed, which is the speed at which the majority of vehicles are travelling, but are not exceeding the stated figure. The highest and lowest figures are taken for the `virtual day`.

Site No	Northbound (Mph)	Southbound (Mph)
Site 1	31 (highest) 26.5 (lowest)	33 (highest) 28.4 (lowest)
Site 2	36.4 (highest) 32.1 (lowest)	37.3 (highest) 32.4 (lowest)
Site 3	42.6 (highest) 37.9 (lowest)	43.5 (highest) 38 (lowest)

We can see that travelling northbound through site 3, 2, 1 vehicles slow down and the opposite is true in the alternate direction. The speeds are broadly consistent with the speed limit.
